| 1.19 Query/set custom registration package content | 11 |
| 1.20 Query/set the heartbeat packet mode | 11 |
| 1.21 Query/set heartbeat data | 12 |
| 1.22 Query/set short connection time | 12 |
| 1.23 Query/set timeout restart time | 13 |
| 1.24 Query/set the time and times of disconnection and reconnection | 13 |
| 1.25 Web Configuration Port | 14 |
| 2. "Modbus function" AT command set | 15 |
| 2.1 Summary of "Modbus Function" Commands | 15 |
| 2.2 Query Modbus working mode and command timeout time | 15 |
| 2.3 Enable Modbus TCP to Modbus RTU protocol conversion | 15 |
| 2.4 Set Modbus gateway command storage time and automatic query interval | 16 |
| 2.5 Query and edit of pre-stored commands of Modbus configuration gateway | 16 |
| 3. "Internet of Things" AT command set | 18 |
| 3.1 Summary of "IoT Capabilities" Directives | 18 |
| 3.2 MQTT and HTTP target IP or domain name configuration | 18 |
| 3.3 Query/set HTTP request method | 18 |
| 3.4 Query/Set HTTP URL Path | 19 |
| 3.5 Query/Set HTTP headers | 19 |
| 3.6 Query/Set MQTT target platform | 20 |
| 3.7 Query/set MQTT keep-alive heartbeat packet sending cycle | 20 |
| 3.8 Query/set MQTT Device Name (Client ID) | 21 |
| 3.9 Query/Set MQTT Username (User Name/Device Name) | 21 |

| 3.10 Query/Set MQTT Product Password (MQTT password/Device Secret) | 22 |
|--|----|
| 3.11 Query/Set the Product Key of Alibaba Cloud MQTT | 22 |
| 3.12 Query/set MQTT subscription topic | 23 |
| 3.13 Query/Set MQTT publish topic | |
| 4. AT Configuration Example | 25 |
| 4.1 Example of connecting to a standard MQTT3.1.1 server | |
| Revision History | |

1. "Basic function" AT command set

Instructions for use of E90-DTU (xxxSLxx-ETH) instruction manual:

- 1. Enter the AT command mode: the serial port sends ++++, send AT again within 3 seconds, and the device returns +OK, then enter the AT command mode;
- 2. This instruction manual supports E90-DTU(230SL22-ETH)_V2.0, E90-DTU(230SL30-ETH)_V2.0, E90-DTU(400SL22-ETH)_V2.0, E90-DTU(400SL30-ETH) _V2.0, E90-DTU(900SL22-ETH)_V2.0, E90-DTU(900SL30-ETH)_V2.0 and other E90 gateways;
- 3. In the following text, "<CR><LF>" and "<r" represent line breaks in different text formats, which are actually HEX (0x0D and 0x0A);
- 4. Support network AT command configuration, which can realize network AT configuration through TCP/UDP transparent transmission mode, please do not use AT configuration in Modbus gateway mode.
- 5. TCP server/TCP client use:

6. UDP Server/UDP Client Use:

Error Code Table:

| Error Code | Illustrate |
|------------|------------------------|
| -1 | Invalid Command Format |
| -2 | Invalid Command |
| -3 | Not Yet Defined |
| -4 | Invalid Parameter |
| -5 | Not Yet Defined |

1.1 Summary of Basic Configuration Instructions

| Command | Illustrate | |
|-----------------------------------|--|--|
| AT+EXAT | Exit AT configuration mode | |
| AT+MODEL | Device model | |
| AT+NAME | device name | |
| AT+SN | Device ID | |
| AT+REBT | Reboot device | |
| AT+RESTORE | Reset | |
| AT+VER | Query firmware version | |
| AT+UART | Serial port parameters | |
| AT+MAC | Device MAC address | |
| AT+LORA | Wireless parameters of the machine | |
| AT+REMOLORA | EMOLORA Configure remote wireless parameters | |
| AT+WAN | Device network parameters | |
| AT+LPORT | Device port | |
| AT+SOCK | Working mode and target network parameters | |
| AT+LINKSTA | Connection status feedback | |
| AT+UARTCLR | Connect serial port cache mode | |
| AT+REGMOD | Registration Package Mode | |
| AT+REGINFO | | |
| AT+HEARTMOD Heartbeat Packet Mode | | |
| AT+HEARTINFO | Heartbeat package content | |
| AT+SHORTM | Short connection | |
| AT+TMORST | T Timeout restart | |
| AT+TMOLINK | Restart after disconnection | |
| AT+WEBCFGPORT | Web configuration port | |

1.2 Enter AT Command

| Command | AT |
|----------|---|
| Function | Enter AT command mode |
| Send | AT |
| Return | <cr><lf>+OK<cr><lf>/<cr><lf>+OK=AT enable<cr><lf></lf></cr></lf></cr></lf></cr></lf></cr> |
| Remark | Returns when there is no connection and configuration: +OK=AT enable Return when there is a connection: +OK |

[Example]

Send +++ first without newline
No line break is required when sending AT
Received \r\n+OK\r\n 或\r\n+OK=AT enable\r\n

1.3 Exit AT Command

| Command | AT+EXAT |
|----------|---|
| Function | Enter AT command mode |
| Send | AT+EXAT <cr><lf></lf></cr> |
| Return | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Send: AT+EXAT\r\n
Received:\r\n+OK\r\n
Wait for the device to restart.

1.4 Query Model

| Command | AT+MODEL |
|----------|---|
| Function | Query Model |
| Send | AT+MODEL <cr><lf></lf></cr> |
| Return | <cr><lf>+OK=<model string=""><cr><lf></lf></cr></model></lf></cr> |
| Remark | Modelstring:NA111 |

Send: $AT+MODEL\r\n$

Received: $\r + OK = NA111 - A \r$

1.5 Query/Set Name

| Command | AT+NAME |
|----------------|---|
| Function | Query, Set name |
| Send (Query) | AT+NAME <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<name string=""><cr><lf></lf></cr></name></lf></cr> |
| Send (Set) | AT+NAME= <name string=""><cr><lf> (Limit 10 Bytes)</lf></cr></name> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Inquire:

Send: $AT+NAME\r\n$

 $Received:\\ \label{eq:ceived} Received:\\ \la$

Set up:

Send: AT+NAME= $001\r\n$ Received: $\r\n +OK\r\n$

1.6 Query/Set ID

| Command | AT+SN |
|----------------|---|
| Function | Query, SetID |
| Send (Query) | AT+SN <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<sn string=""><cr><lf></lf></cr></sn></lf></cr> |
| Send (Set) | AT+SN= <sn string=""><cr><lf> (Limit 24 Bytes)</lf></cr></sn> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Inquire:

Send: $AT+SN\r\n$

Received: $\r + OK = 0001 \r$

Set up:

Send: AT+SN=111\r\n
Received: \r\n +OK \r\n

1.7 Reboot

| Command | AT+REBT |
|----------|---|
| Function | Reboot |
| Send | AT+REBT <cr><lf></lf></cr> |
| Return | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Send: AT+REBT\r\n
Received: \r\n +OK \r\n
Wait for the restart to complete.

1.8 Reset

| Command | AT+RESTORE |
|----------|---|
| Function | Reset |
| Send | AT+RESTORE <cr><lf></lf></cr> |
| Return | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Send: AT+RESTORE\r\n
Received: \r\n +OK \r\n
Wait for the Reset to complete.

1.9 Query version Information

| Command | AT+VER |
|----------|---|
| Function | Query version information |
| Send | AT+VER <cr><lf></lf></cr> |
| Return | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |

[Example]

Sent: $AT+VER\r\n$

Received: $\r = 9050-0-xx\r$ [**Note**] xx represents different versions;

1.10 Query MAC Address

| Command | AT+MAC |
|----------|-------------------|
| Function | Query MAC Address |
| Send | AT+MAC <cr></cr> |

| Return | <cr><lf>+OK=<mac><cr><lf></lf></cr></mac></lf></cr> |
|---------|---|
| Remarks | Return data format "xx-xx-xx-xx-xx" |

Sent: $AT+MAC\r\n$

Received: $\r\=84-C2-E4-36-05-A2\r\$

1.11 Query/Set Native LORA Parameters

| Command | LORA |
|-------------------|---|
| Function | Configure native lora parameters |
| Send (Query) | AT+LORA <cr><lf></lf></cr> |
| Return (Query) | <pre><cr><lf>+OK=<addr><netid><air_baud><pack_length><rssi_ en=""> <tx_pow><ch><rssi_data><tr_mod><relay><lbt><wor><wor _tim=""> <crypt><cr><lf></lf></cr></crypt></wor></wor></lbt></relay></tr_mod></rssi_data></ch></tx_pow></rssi_></pack_length></air_baud></netid></addr></lf></cr></pre> |
| Send (Set) | AT+LORA= <addr><netid><air_baud><pack_length><rssi_en> <tx_pow><ch><rssi_data><tr_mod><relay><lbt><wor><wor _tim=""> <crypt><cr><lf></lf></cr></crypt></wor></wor></lbt></relay></tr_mod></rssi_data></ch></tx_pow></rssi_en></pack_length></air_baud></netid></addr> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | 1. ADDR(local address):0-65535 2. NETID(Network ID):0-255 3. AIR_BAUD(Air data rate): 300,600,1200,2400,4800,9600,19200 (230SL) 300,1200,2400,4800,9600,19200,38400,62500 (400SL/900SL) 4. PACK_LENGTH(Packet length):240, 128, 64, 32 5. RSSI_EN(Ambient Noise Enable) Close:RSCHOFF, Open:RSCHON 6. TX_POW(Transmit power) High:PWMAX, Middle:PWMID, Low:PWLOW, Very Low:PWMIN 7. CH(Channel):0-64(230SL), 0-83(400SL), 0-80(900SL) 8. RSSI_DATA(Data Noise Enable) Close:RSDATOFF, Open:RSDATON 9. TR_MOD(transfer method) Transparent transmission:TRNOR, fixed point transmission:TRFIX 10. RELAY(Relay function) relay closed:RLYOFF, relay open:RLYON 11. LBT(LBT Enable) Close:LBTOFF, Open:LBTON 12. WOR(WORMode) WOR receiver:WORRX, WOR sender:WORTX, CloseWOR:WOROFF 13. WOR_TIM(WOR period, unit ms) 500, 1000, 1500, 2000, 2500, 3000, 3500, 4000 14. CRYPT communication key:0-65535 |

[Example]

Query:

Send: $AT+LORA \r\n$

Received:

 $\rder \rder \rde$

00,0\r\n Set Up:

Send:

AT+LORA=0,0,2400,240,RSCHOFF,PWMAX,23,RSDATOFF,TRNOR,RLYOFF,LBTOFF,WOROFF,

2000,0\r\n

Received: $\r\n+OK\r\n$

1.12 Set Remote LORA Parameters

| Command | LORA |
|------------------|--|
| Function | Configure native lora parameters |
| Send (Set Up) | AT+REMOLORA= <addr><netid><air_baud><pack_length><rssi_e n=""> <tx_pow><ch><rssi_data><tr_mod><relay><lbt><wor><wor_t im=""> <crypt><cr><lf></lf></cr></crypt></wor_t></wor></lbt></relay></tr_mod></rssi_data></ch></tx_pow></rssi_e></pack_length></air_baud></netid></addr> |
| Return (Set Up) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | 1. ADDR(Local Address):0-65535 2. NETID(Network ID):0-255 3. BAUD(Baud rate): |

[Note]: The remote configuration must be connected with transparent transmission before the configuration is successful, and the lower airspeed configuration and the sub-packet greater than

128Bit can be sent successfully.

[Example]

Inquire:

Send: AT+ AT+REMOLORA\r\n

receive:

 $\label{eq:control} $$ \r\n+OK=0,0,115200,8N1,2400,240,RSCHOFF,PWMAX,16,RSDATOFF,TRNOR,RLYOFF,LBTOFF,WOROFF,2000,0\r\n$

Set Up: Send:

AT+HTTPREQMODE=0,0,115200,8N1,2400,240,RSCHOFF,PWMAX,16,RSDATOFF,TRNOR,RLARGE AND ADMINISTRATION AND ADMIN

YOFF,LBTOFF,WOROFF,2000,0\r\n

Received: $\r\n+OK\r\n$

1.13 Query/Set Network Parameters

| Command | AT+WAN |
|-------------------|--|
| Function | Query/set Network Parameters |
| Send (Query) | AT+WAN <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode, address,="" gateway,<br="" mask,="">DNS><cr><lf></lf></cr></mode,></lf></cr> |
| Send (Set) | AT+WAN= <mode, address,="" dns="" gateway,="" mask,=""><cr><lf></lf></cr></mode,> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Mode: DHCP/STATIC Address:Local IP address Mask:subnet mask Gateway:gateway DNS:DNS server |

[Example]

Inquire:

Send: $AT+WAN\r\n$

Received: \r\n+OK= STATIC ,192.168.3.7,255.255.255.0,192.168.3.1,114.114.114.114\r\n

Settings: (Dynamic IP)

Send: AT+WAN=DHCP, 192.168.3.7,255.255.255.0,192.168.3.1,114.114.114.114\r\n

Received:\r\n+OK\r\n Settings: (Static IP)

Send: AT+WAN=STATIC,192.168.3.7,255.255.0,192.168.3.1,114.114.114.114\r\n

 $Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} A the lambda and lambda and$

1.14 Query/Set Local Port Number

| Command | AT+LPORT |
|---------|----------|
|---------|----------|

| Function | Query/Set Local Port Number |
|-------------------|---|
| Send (Query) | AT+LPORT <cr></cr> |
| Return (Query) | <cr><lf>+OK=<value><cr><lf></lf></cr></value></lf></cr> |
| Send (Set) | AT+LPORT= <value><cr></cr></value> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Value (port number): 0-65535,0 (the client mode uses a random port, and the server mode needs to use the "non-0" parameter, otherwise the device server will fail to open); |

Inquire:

Send: AT+LPORT\r\n

Received: $\r\n+OK=8887\r\n$

set up:

Send: AT+LPORT= $8883\r\n$

Received: $\r\n+OK\r\n$

1.15 Query/set the working mode of the machine and network parameters of the target device

| Command | AT+SOCK |
|-------------------|--|
| Send (Query) | Query and set network protocol parameters |
| Return (Query) | AT+SOCK <cr><lf></lf></cr> |
| Send (Set) | <cr><lf>+OK=<model, ip,="" port="" remote=""><cr><lf></lf></cr></model,></lf></cr> |
| Return (Set) | AT+SOCK= <model, ip,="" port="" remote=""><cr><lf></lf></cr></model,> |
| Remarks | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Function | Model (working mode): TCPC, TCPS, UDPC, UDPS, MQTTC, HTTPC; Remote IP (target IP/domain name): a maximum of 128-character domain name can be configured; Remote Port: 1-65535; |

[Example]

Inquire:

Send: AT+SOCK\r\n

 $Received: \label{eq:condition} Received: \label{eq:condition$

set up:

 $Send: AT + SOCK = TCPC, 192.168.3.100, 8886 \\ \ r \\ \ n$

Received: $\r\n+OK\r\n$

1.16 Query Network Link Status

| Command | AT+LINKSTA |
|----------|---|
| Function | Query Network link Status |
| Send | AT+LINKSTA <cr><lf></lf></cr> |
| Return | <cr><lf>+OK=<sta><cr><lf></lf></cr></sta></lf></cr> |
| Remarks | STA: Connect/Disconnect |

[Example]

Send: AT+LINKSTA \r

Received:\r\n+OK=Disconnect\r\n

1.17 Query/Set Serial Port Cache Clearing Status

| Command | AT+UARTCLR |
|-------------------|---|
| Function | Query and set serial port cache clearing status |
| Send (Query) | AT+UARTCLR <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<sta><cr><lf></lf></cr></sta></lf></cr> |
| Send (Set) | AT+UARTCLR= <sta><cr><lf></lf></cr></sta> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | STA: ON (Enable connection to clear cache) OFF (Disable connection clear cache) |

[Example]

Inquire:

set up:

Send: AT+UARTCLR=OFF\r\n

 $Received: \label{eq:ceived} Received: \label{eq:ceived: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received: Received: Received: Received: Received: Received: Received: \label{eq:ceived: Received: Received$

1.18 Query/set Registration Package Mode

| Command | AT+REGMOD |
|-------------------|---|
| Function | Query/set Registration Package Mode |
| Send (Query) | AT+REGMOD <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<status><cr><lf></lf></cr></status></lf></cr> |
| Send (Set) | AT+REGMOD= <status><cr><lf></lf></cr></status> |

| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
|--------------|---|
| | Status: OFF - Disabled |
| | OLMAC - Send MAC on first connection |
| Remarks | OLCSTM - First Connection Send Custom |
| | EMBMAC - send MAC per packet |
| | EMBCSTM - Send Per Packet Custom |

Inquire:

Send: AT+REGMOD\r\n Received:\r\n+OK=OFF\r\n

set up:

Send: AT+UARTCLR=OLMAC $\r\$

Received: $\r\n+OK\r\n$

1.19 Query/set custom registration package content

| Command | REGINFO |
|-------------------|--|
| Function | Query/set custom registration package content |
| Send (Query) | AT+HEARTINFO <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><data><cr><lf></lf></cr></data></mode></lf></cr> |
| Send (Set) | AT+HEARTINFO= <mode><data><cr><lf></lf></cr></data></mode> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Mode: data format (HEX) hexadecimal, (STR) string; Data data: ASCII limit is 40 bytes, HEX limit is 20 bytes; |

[Example]

Inquire:

Send: AT+REGINFO $\r\$

Received:\r\n+OK=STR,regist msg\r\n

set up:

Send: AT+REGINFO=STR,EBTYE TEST\r\n

Received: $\r\n+OK\r\n$

1.20 Query/set the heartbeat packet mode

| Command | AT+HEARTMOD |
|----------------|--|
| Function | Query/set the heartbeat packet mode |
| Send (Query) | AT+ HEARTMOD <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><time><cr><lf></lf></cr></time></mode></lf></cr> |

| Send (Set) | AT+HEARTMOD= <mode><time><cr><lf></lf></cr></time></mode> |
|--------------|--|
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Mode: NONE (closed), UART (serial heartbeat), NET (network heartbeat); Time: time 0-65535s, 0 (close the heartbeat); |

Inquire:

Send: AT+HEARTMOD\r\n
Received:\r\n+OK=NONE,0\r\n
Send: AT+HEARTMOD =NET,50\r\n

Received: $\r\n+OK\r\n$

1.21 Query/set heartbeat data

| Command | AT+HEARTINFO |
|----------------|--|
| Function | Query/set heartbeat data |
| Send (Query) | AT+HEARTINFO <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><data><cr><lf></lf></cr></data></mode></lf></cr> |
| Send (Set) | AT+HEARTINFO= <mode><data><cr><lf></lf></cr></data></mode> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Mode: data format (HEX) hexadecimal, (STR) string; Data data: ASCII limit is 40 bytes, HEX limit is 20 bytes; |

[Example]

Inquire:

Send: AT+HEARTINFO\r\n

Received:\r\n+OK=STR,heart beat msg\r\n

set up:

Send: AT+HEARTINFO=STR,EBTYE HEART TEST \r

Received: $\r\n+OK\r\n$

1.22 Query/set short connection time

| Command | AT+SHORTM |
|----------------|---|
| Function | Query/set short connection time |
| Send (Query) | AT+SHORTM <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<time><cr><lf></lf></cr></time></lf></cr> |

| Send (Set) | AT+SHORTM= <time><cr><lf></lf></cr></time> |
|--------------|--|
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Time: Limit 2-255s, 0 is off; |

Inquire:

Send: AT+SHORTM\r\n Received:\r\n+OK=0\r\n

set up:

Send: AT+SHORTM=5\r\n Received:\r\n+OK\r\n

1.23 Query/set timeout restart time

| Command | AT+TMORST |
|-------------------|---|
| Function | Query/set timeout restart time |
| Send (Query) | AT+TMORST <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<time><cr><lf></lf></cr></time></lf></cr> |
| Send (Set) | AT+TMORST= <time><cr><lf>(限制 60-65535s, 0 为关闭)</lf></cr></time> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Time: Limit 2-255s, 0 is off; |

[Example]

Inquire:

Send: AT+TMORST\r\n
Received:\r\n+OK=300\r\n

set up:

Send: AT+SHORTM= $350\r\n$

Received: $\r\n+OK\r\n$

1.24 Query/set the time and times of disconnection and reconnection

| Command | AT+TMOLINK |
|----------------|--|
| Function | Query/set the time and times of disconnection and reconnection |
| Send (Query) | AT+TMOLINK <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<times, num=""><cr><lf></lf></cr></times,></lf></cr> |

| Send (Set) | AT+TMOLINK= <times, num=""><cr><lf></lf></cr></times,> |
|--------------|--|
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Times (disconnection and reconnection time): limit 1-255, 0 is closed; Num (times of disconnection and reconnection): limit 1-60 times; |

Inquire:

Send: AT+TMOLINK $\r\n$ Received: $\r\n+OK=5,5\r\n$

set up:

Send: AT+TMOLINK=10,10\r\n

Received: $\r\n+OK\r\n$

1.25 Web Configuration Port

| Command | AT+WEBCFGPORT |
|-------------------|---|
| Function | Query and set web configuration port |
| Send (Query) | AT+WEBCFGPORT <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<port><cr><lf></lf></cr></port></lf></cr> |
| Send (Set) | AT+TMOLINK= <port><cr><lf></lf></cr></port> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | PORT: 2-65535 |

[Example]

Inquire:

Send: AT+WEBCFGPORT\r\n Received:\r\n+OK=80\r\n

set up:

Send: AT+WEBCFGPORT= $80\r\$

Received: $\r\n+OK\r\n$

2. "Modbus function" AT command set

2.1 Summary of "Modbus Function" Commands

| Command | Description |
|---------------|-------------------------------------|
| AT+MODWKMOD | Modbus mode |
| AT+MODPTCL | Protocol conversion |
| AT+MODGTWYTM | Storage Gateway Instruction Storage |
| AI+MODGIWIIM | Time and Query Interval |
| AT+MODCMDEDIT | Modbus RTU command pre-stored |

2.2 Query Modbus working mode and command timeout time

| Command | AT+MODWKMOD |
|----------------|--|
| Function | Query and set Modbus working mode |
| Send (Query) | AT+MODWKMOD <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><timeout><cr><lf></lf></cr></timeout></mode></lf></cr> |
| Remarks | Mode: NONE (disables MODBUS) SIMPL (Simple Protocol Conversion) MULIT (Multi-Master Mode) STORE (Storage Gateway) CONFIG (Configurable Gateway) AUTOUP (active upload mode) Timeout:0-65535; |

Inquire:

Send: AT+MODWKMOD\r\n
Received:\r\n+OK=SIMPL,100\r\n

set up:

Send: AT+MODWKMOD=MULIT,1000\r\n

Received: $\r\n+OK\r\n$

2.3 Enable Modbus TCP to Modbus RTU protocol conversion

| Command | AT+MODPTCL |
|----------------|---|
| Function | Query and set protocol conversion (Modbus TCP<=>Modbus RTU) |
| Send (Query) | AT+MODPTCL <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><cr><lf></lf></cr></mode></lf></cr> |
| Remarks | Mode: ON(Enable protocol conversion) OFF(Disable protocol conversion) |

Inquire:

Send: AT+MODPTCL\r\n Received:\r\n+OK=ON\r\n

set up:

Send: AT+MODPTCL=ON $\$ n

Received: $\r\n+OK\r\n$

2.4 Set Modbus gateway command storage time and automatic query

interval

| Command | AT+MODGTWYTM | |
|----------------|---|--|
| Function | Query and configure Modbus gateway command storage time and automatic query interval | |
| Send (Query) | AT+MODGTWYTM <cr><lf></lf></cr> | |
| Return (Query) | <cr><lf>+OK=<time1><time2><cr><lf></lf></cr></time2></time1></lf></cr> | |
| Remarks | Time1: Instruction storage time (1-255 seconds) Time2: Automatic query interval time (1-65535 milliseconds) | |

Inquire:

Send: AT+MODGTWYTM\r\n Received:\r\n+OK=10,200\r\n

set up:

Send: AT+MODGTWYTM= $5,100\r\n$

Received: $\r\n+OK\r\n$

2.5 Query and edit of pre-stored commands of Modbus configuration

gateway

| Command | AT+MODCMDEDIT |
|----------------|--|
| Function | Query and edit of pre-stored commands of Modbus configuration gateway |
| Send (Query) | AT+MODCMDEDIT <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<mode><cmd><cr><lf></lf></cr></cmd></mode></lf></cr> |
| Remarks | Mode: ADD add command; DEL delete instruction; CLR clear command; CMD: Modbus command (only supports standard Modbus RTU command, no need to fill in the verification, only the function code of read command 01, 02, 03, 04 can be configured), cannot store the same command and return +ERR=-4; |

Inquire:

Send: AT+MODCMDEDIT\r\n

Received: \r\n+OK=\r\n 1: 02 03 00 00 00 02\r\n 2: 01 03 00 05 00 00\r\n

set up:

Send: AT+MODCMDEDIT=ADD,0103000A0003\r\n(Add command)

 $Received: \label{eq:rn+OK} Received: \label{eq:rn+OK} Received: \label{eq:rn+OK} Received: \label{eq:rn+OK} Received: \label{eq:rn+OK-rn} Received: \label{eq:rn+OK-rn} Received: \label{eq:rn+OK-rn} Received: \label{eq:rn+OK-rn} Received: \label{eq:rn+OK-rn-Ro$

Send: AT+MODCMDEDIT=DEL,0103000A0003\r\n(Delete command)

 $Received: \label{eq:received} Received: \label{eq:received} Rece$

Send: AT+MODCMDEDIT=CLR,0103000A0003\r\n(Clear command)

 $Received: \label{eq:received} Received: \label{eq:received} Rece$

3. "Internet of Things" AT command set

3.1 Summary of "IoT Capabilities" Directives

| Command | Description |
|---------------|----------------------------------|
| AT+HTPREQMODE | HTTP request method |
| AT+HTPURL | HTTP URL path |
| AT+HTPHEAD | HTTP headers |
| AT+MQTTCLOUD | MQTT platform |
| AT+MQTKPALIVE | MQTT heartbeat keep-alive period |
| AT+MQTDEVID | MQTT Client ID |
| AT+MQTUSER | MQTT User Name |
| AT+MQTPASS | MQTT Password |
| AT+MQTTPRDKEY | Alibaba Cloud Product Key |
| AT+MQTSUB | MQTT subscription topic |
| AT+MQTPUB | MQTT publish topic |

3.2 MQTT and HTTP target IP or domain name configuration

Refer to "Query/Set the Working Mode of the Machine and the Network Parameters of the Target Device".

Set the MQTT mode and target parameters:

Send: AT+SOCK=MQTTC, mqtt.heclouds.com,6002\r\n

Received: $\r\n+OK\r\n$

Set the MQTT mode and target parameters:

Send: AT+SOCK=HTTPC,www.baidu.com,80\r\n

 $Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} Received: \label{eq:ceived: lambda} A the lambda and lambda and$

3.3 Query/set HTTP request method

| Command | AT+HTPREQMODE |
|-------------------|---|
| Function | Query/set HTTP request method |
| Send (Query) | AT+HTPREQMODE <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<method><cr><lf></lf></cr></method></lf></cr> |
| Send (Set) | AT+HTPREQMODE= <method><cr><lf></lf></cr></method> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Method: GET\POST |

Inquire:

Send: AT+HTPREQMODE\r\n Received:\r\n+OK=GET\r\n

set up:

Send: AT+HTPREQMODE=POST \r

Received: $\r\n+OK\r\n$

3.4 Query/Set HTTP URL Path

| Command | AT+HTPURL |
|-------------------|---|
| Function | Query/Set HTTP URL Path |
| Send (Query) | AT+HTPURL <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<path><cr><lf></lf></cr></path></lf></cr> |
| Send (Set) | AT+HTPURL= <path><cr><lf></lf></cr></path> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Path: HTTP request URL resource address (length limit 0-128 characters) |

[Example]

Inquire:

Send: AT+HTPURL\r\n

Received: $\r = 1.php \r$

set up:

 $Send: AT + HTPURL = /view/ed7e65a90408763231126edb6f1aff00bfd57061.html \label{eq:control_fit} html \label{eq:control_fit} \\ html \label{eq:control_fit} AT + HTPURL = /view/ed7e65a90408763231126edb6f1aff00bfd57061.html \label{eq:control_fit} \\ html \label{eq:control_fit} html \label{eq:control_fit} html \label{eq:control_fit} html \label{eq:control_fit} \\ html \label{eq:control_fit} html \$

Received: $\r\n+OK\r\n$

3.5 Query/Set HTTP headers

| Command | AT+HTPHEAD |
|-------------------|---|
| Function | Query/Set HTTP headers |
| Send (Query) | AT+HTPHEAD <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<para>,<head><cr><lf></lf></cr></head></para></lf></cr> |
| Send (Set) | AT+HTPHEAD= <para>,<head><cr><lf></lf></cr></head></para> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Para (HTTP returns serial port data with header): DEL: without header; ADD: with Baotou; Head (HTTP request header): length limit 128 characters; |

[Example]

Inquire:

Send: AT+HTPHEAD $r\n$

Received:\r\n+OK=DEL,User-Agent: Mozilla/5.0\r\n

set up:

Send: AT+HTPHEAD=ADD, Host:www.ebyte.com\r\n

Received: $\r\n+OK\r\n$

3.6 Query/Set MQTT target platform

| Command | AT+MQTTCLOUD |
|-------------------|--|
| Function | Query/Set MQTT target platform |
| Send (Query) | AT+MQTTCLOUD <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<server><cr><lf></lf></cr></server></lf></cr> |
| Send (Set) | AT+MQTTCLOUD= <server><cr><lf></lf></cr></server> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Server (MQTT target platform): STANDARD (MQTT3.1.1 standard protocol server) ONENET (OneNET-MQTT server) ALI (Alibaba Cloud MQTT server) BAIDU (Baidu Cloud MQTT Server) HUAWEI (Huawei Cloud MQTT Server) |

[Example]

Inquire:

Send: $AT+MQTTCLOUD\r\n$

set up:

Send: AT+MQTTCLOUD=BAIDU $\r\$

Received: $\r\n+OK\r\n$

3.7 Query/set MQTT keep-alive heartbeat packet sending cycle

| Command | AT+MQTKPALIVE | |
|-------------------|---|--|
| Function | Query/set MQTT keep-alive heartbeat packet sending cycle | |
| Send (Query) | AT+MQTKPALIVE <cr><lf></lf></cr> | |
| Return (Query) | <cr><lf>+OK=<time><cr><lf></lf></cr></time></lf></cr> | |
| Send (Set) | AT+MQTKPALIVE= <time><cr><lf></lf></cr></time> | |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> | |
| Remarks | Time: MQTT keep-alive heartbeat time (limit 1-255 seconds, default 60s, it is not recommended to modify); | |

[Example]

Inquire:

Send: AT+MQTKPALIVE\r\n Received:\r\n+OK=60\r\n

set up:

Send: AT+MQTKPALIVE= $30\r\$

Received: $\r\n+OK\r\n$

3.8 Query/set MQTT Device Name (Client ID)

| Command | AT+MQTDEVID |
|-------------------|---|
| Function | Query/set MQTT Device Name (Client ID) |
| Send (Query) | AT+MQTDEVID <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<client id=""><cr><lf></lf></cr></client></lf></cr> |
| Send (Set) | AT+MQTDEVID= <client id=""><cr><lf></lf></cr></client> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Client ID: MQTT device name (Client ID) is limited to 128 characters in length; |

[Example]

Inquire:

Send: AT+MQTDEVID\r\n Received: \r\n+OK=test-1\r\n

set up:

Received: $\r\n+OK\r\n$

3.9 Query/Set MQTT Username (User Name/Device Name)

| Command | AT+MQTUSER |
|----------------|---|
| Function | Query/Set MQTT Username (User Name/ Device Name) |
| Send (Query) | AT+MQTUSER <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<user name=""><cr><lf></lf></cr></user></lf></cr> |
| Send (Set) | AT+MQTUSER= <user name=""><cr><lf></lf></cr></user> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | User Name: MQTT product ID (User Name/ device name) has a limited length of 128 characters; |

[Example]

Inquire:

Send: AT+MQTUSER $\r\$

 $Received: \\ \label{eq:condition} Received: \\ \label{eq:condition} Received: \\ \label{eq:condition} \\ \label{eq:condition} \\ \label{eq:condition} Received: \\ \label{eq:condition} \\ \label{eq:condition} Received: \\ \label{eq:condition} \\ \label{eq:condition} Received: \\ \label{eq:condition} \\ \labelee \\ \labele$

set up:

Send: AT+MQTUSER= $12345678\&a1Ofdo510\r\n$

Received: $\r\n+OK\r\n$

3.10 Query/Set MQTT Product Password (MQTT password/Device

Secret)

| Command | AT+MQTPASS |
|-------------------|--|
| Function | Query/Set MQTT log in Password (MQTT Password/Device Secret) |
| Send (Query) | AT+MQTPASS <cr><lf></lf></cr> |
| Return (Query) | <cr><lf>+OK=<password><cr><lf></lf></cr></password></lf></cr> |
| Send (Set) | AT+MQTPASS= <password><cr><lf></lf></cr></password> |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> |
| Remarks | Password: MQTT login password (MQTT Password/Device Secret) length is limited to 128 characters; |

[Example]

Inquire:

Send: $AT+MQTPASS\r\n$

Received: $\r\n+OK=12345678\r\n$

set up:

Send: AT+MQTPASS= $87654321\r\n$

Received: $\r\n+OK\r\n$

3.11 Query/Set the Product Key of Alibaba Cloud MQTT

| Command | AT+MQTTPRDKEY | | |
|----------------|--|--|--|
| Function | Query/Set the Product Key of Alibaba Cloud MQTT | | |
| Send (Query) | AT+MQTTPRDKEY <cr><lf></lf></cr> | | |
| Return (Query) | <cr><lf>+OK=<product key=""><cr><lf></lf></cr></product></lf></cr> | | |
| Send (Set) | AT+MQTTPRDKEY= <product key=""><cr><lf></lf></cr></product> | | |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> | | |
| Remarks | Product Key: Product Key of Alibaba Cloud (limited to 64 characters) | | |

[Example]

Inquire:

Send: AT+MQTTPRDKEY\r\n

 $Received: \\ \label{eq:ceived} Received: \\ \label{eq:ceived} Rece$

Copyright ©2012-2022, Chengdu Ebyte Electronic Technology Co., Ltd.

set up:

 $Send: AT + MQTTPRDKEY = a1HEeOIqVHU \backslash r \backslash n$

Received: $\r\n+OK\r\n$

3.12 Query/set MQTT subscription topic

| Command | AT+MQTSUB | | |
|----------------|---|--|--|
| Function | Query/set MQTT subscription topic | | |
| Send (Query) | AT+MQTSUB <cr><lf></lf></cr> | | |
| Return (Query) | <cr><lf>+OK=<qos>,<topic><cr><lf></lf></cr></topic></qos></lf></cr> | | |
| Send (Set) | AT+MQTSUB= <qos>,<topic><cr><lf></lf></cr></topic></qos> | | |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> | | |
| Remarks | Qos: only supports level 0, 1; Topic: MQTT subscription topic (limited to 128 characters in length) | | |

[Example]

Inquire:

Send: AT+MQTSUB $\r\$

Received: $\r\n + OK = 0$,topic $\r\n$

set up:

 $Received: \label{eq:received} Received: \label{eq:received} Rece$

3.13 Query/Set MQTT publish topic

| Command | AT+MQTPUB | | |
|-------------------|---|--|--|
| Function | Query/Set MQTT publish topic | | |
| Send (Query) | AT+MQTPUB <cr><lf></lf></cr> | | |
| Return (Query) | <cr><lf>+OK=<qos>,<topic><cr><lf></lf></cr></topic></qos></lf></cr> | | |
| Send (Set) | AT+MQTPUB= <qos>,<topic><cr><lf></lf></cr></topic></qos> | | |
| Return (Set) | <cr><lf>+OK<cr><lf></lf></cr></lf></cr> | | |
| Remarks | Qos: only supports level 0, 1; Topic: MQTT publish topic (limited to 128 characters in length) | | |

[Example]

Inquire:

Send: $AT+MQTPUB\r\n$

Received: $\r\=0$,topic $\r\$

set up:

Send: AT+MQTPUB= 0,/ggip6zWo8of/NA111-TEST/user/PUB\r\n

 $Received: \label{eq:received} Received: \label{eq:received: Received: Received: Received: \label{eq:received: Received: Received: Received: Received: \label{eq:received: Received: Received: Received: Received: \label{eq:received: Received: Received: Received: Received: Received: \label{eq:received: Received: Received: \label{eq:received: Received: Received: \label{eq:received: Received: \labeled: Received: \labeled: \lab$

4. AT Configuration Example

4.1 Example of connecting to a standard MQTT3.1.1 server

```
{
    Client id:876275396
    mqtt username:485233
    mqtt password:E DEV01
    mqtt server: mqtt.heclouds.com
    mqtt port:6002
Restore factory settings before configuration to avoid enabling unused functions.
SEND (+++)
3S内SEND (AT)
RECV(+OK=AT enable)
SEND (AT+RESTORE)
RECV(+OK)
The above steps can use the hardware to restore the factory settings.
Step 1: Enter AT configuration mode;
SEND (+++)
3S内SEND (AT)
RECV(+OK=AT enable)
Step 2: Enable dynamic IP, if you configure the corresponding IP for the local area network
MQTT server, use dynamic IP here;
SEND(AT+WAN=DHCP,192.168.3.7,255.255.0,192.168.3.1,114.114.114.114)
RECV(+OK)
Step 3: Configure the working mode and the MQTT server address and port;
SEND(AT+SOCK=MQTTC,mqtt.heclouds.com,6002)
RECV(+OK=And local port has been set to 0)
Step 4: Select the MQTT platform;
SEND(AT+MQTTCLOUD=STANDARD)
RECV(+OK)
Step 5: Configure the Client id of the device;
SEND(AT+MQTDEVID=876275396)
RECV(+OK)
Step 6: Configure the mqtt username of the device;
SEND(AT+MQTUSER=485233)
RECV(+OK)
Step 7: Configure the mqtt password of the device;
SEND(AT+MQTPASS=E DEV01)
RECV(+OK)
```

Step 8: Subscribe to the corresponding topic (Topic);

SEND(AT+MQTSUB=0,EBYTE TEST)

RECV(+OK)

Step 9: Configure the topic used for publishing;

SEND(AT+MQTPUB=0,EBYTE TEST)

RECV(+OK)

Step 10: Restart the device;

SEND(AT+REBT)

RECV(+OK)

The final interpretation right belongs to Chengdu Ebyte Electronic Technology Co., Ltd.
